SignalHire Identifies the Top Trending U.S. Careers—And the Numbers Back It Up

According to a recent analysis published by recruitment intelligence provider SignalHire, the U.S. labour market is experiencing a clear surge in demand across tech, healthcare, engineering and analytical roles. Their article “The Top 20 In-Demand Jobs in the USA Right Now: Salaries, Growth, & How to Get Hired” (published 10 November 2025) draws from both internal data and publicly-available sources—including the Bureau of Labor Statistics (BLS) labour-projections—to identify where job seekers and employers are most active.

Key findings

SignalHire highlights the following roles as especially “hot” thanks to a combination of high growth rates, above-average pay and a talent-shortage dynamic:

- Software Developer: median wage approx. US $132,270; projected growth ~25 % from 2022-2032.
- Data Scientist: median wage cited ~$139,030; projected growth ~35 % to 2032. Bureau of Labor Statistics
- Registered Nurse: median wage ~$86,070; projected growth ~6 % and very large number of openings owing to retirements and healthcare demand.
- Cybersecurity Analyst (Information Security Analyst): median ~$120,360; projected growth ~32 % to 2032.
- Nurse Practitioner: median ~$128,490; projected growth ~45 % by 2032.
- Financial Manager: median ~$139,790; projected growth ~16 %.
- Web Developer, Operations Research Analyst, Physical Therapist, and other roles also make the list. Signalhire

Why these jobs are trending

SignalHire outlines several macro-drivers behind this demand:

- **Technological advancement** – AI, cloud, data analytics and automation are fuelling demand for developers, data scientists and cybersecurity professionals.
- **Demographic shifts & healthcare pressure** – An aging population and evolving care settings are increasing demand for nurses, nurse practitioners, physical therapists and other health-care roles.
- **Skills gap & transformation pressure** – Many employers report shortages of qualified workers in analytics, cybersecurity and engineering. That supply-constraint is enabling higher salaries and faster growth.

How SignalHire’s findings align with public data

Scan Me:

On several key roles, the alignment is strong:

- For Data Scientists: BLS projects ~34 % growth from 2024-34. U.S. Bureau of Labor Statistics . SignalHire's ~35 % projection matches closely.
- For Software Developers (Computer & Information Technology occupations): BLS projects ~15 % growth 2024-34. U.S. Bureau of Labor Statistics. SignalHire reports ~25 % for 2022-32. The discrepancy suggests either a different base year (2022) or inclusion of adjacent roles.
- For broader tech & IT occupations: BLS notes "computer & information technology occupations" will grow much faster than average.

Thus, while exact numerical projections differ slightly, the broad trend highlighted by SignalHire — strong growth in technology, healthcare, analytics roles — is supported by independent public data.

Implications for job-seekers and employers

- For candidates: These roles represent areas where demand is strong, pay is above median and opportunities for entry or advancement are growing. SignalHire emphasizes the importance of relevant certifications, education and upskilling in these fields.
- For employers and recruiters: SignalHire's data suggests intense competition for talent in key roles. Building pipelines, offering competitive compensation, and focusing on skills development will be critical.
- For policy-makers & educators: The skills gap highlighted by both SignalHire and public sources underscores the need for training programmes, credentialing pathways and collaborations between education and industry.

About SignalHire

SignalHire is a recruitment-intelligence and talent-sourcing platform that aggregates data from more than 850 million professional profiles to support hiring, sourcing and talent pipeline strategies. The research behind this "Top 20" list draws both from publicly-available labour-market data (such as BLS projections) and SignalHire's own internal sourcing analytics.
