

SLA Medical Highlights Advanced Pigmentation Treatment in Manchester for Uneven Skin Tone, Melasma and More Complex Cases

Wednesday 29 April, 2026

Manchester, United Kingdom — April 28, 2026

SLA Medical is highlighting its advanced pigmentation treatment in Manchester as part of the clinic's broader focus on skin health, personalised aesthetic care, and results-driven treatment planning. At SLA Medical, pigmentation treatment is designed to address visible discolouration, uneven skin tone, sun damage, and post-inflammatory marks through tailored plans based on the type, depth, and cause of the pigment.

SLA Medical's approach to pigmentation treatment may include a combination of chemical peels, laser therapy, IPL, BBL, medical-grade skincare, and targeted skin planning, depending on the individual presentation. The clinic also places emphasis on detailed assessment before treatment, recognising that pigmentation can present in different forms, from more superficial sunspots and freckles to more persistent conditions such as melasma, which can affect both the outer and deeper layers of the skin.

For patients with more severe or stubborn pigmentation concerns, including recurrent melasma and deeper discolouration, SLA Medical follows a personalised strategy focused on controlling pigment production, improving overall skin tone, and supporting long-term skin health. The clinic's current treatment content reflects a layered approach that may combine in-clinic procedures with prescription-led or medical-grade home care, alongside sun protection and maintenance planning to help reduce recurrence.

SLA Medical also integrates advanced technologies into its pigmentation pathways where clinically appropriate. Its recent educational content references tools and modalities including IPL, BroadBand Light (BBL), BioRePeel, and selected laser platforms used to address pigmentation, improve skin clarity, and support rejuvenation with tailored protocols and minimal to moderate downtime depending on the treatment selected.

"Pigmentation is rarely a one-size-fits-all concern. At SLA Medical, we look carefully at the cause, depth, severity and behaviour of the pigment before recommending treatment. That is especially important in more persistent cases such as melasma or advanced uneven skin tone, where successful treatment depends on precision, consistency and a plan that supports the skin long term," said Nurse SarahLouise, Founder of SLA Medical. Nurse SarahLouise is the founder of SLA Medical, and a leading figure in advanced skin health and aesthetic care.

By positioning pigmentation treatment within a broader skin-health framework, SLA Medical continues to support patients seeking clearer, more even, and healthier-looking skin through medically informed, personalised care. This includes patients dealing with everyday pigmentation concerns as well as those facing more complex or chronic patterns of pigmentation that require a more considered treatment pathway.

About SLA Medical

SLA Medical is a Manchester-based advanced aesthetics and skin clinic founded in 2016 by Nurse SarahLouise. The clinic offers personalised treatment plans across skin, laser, and aesthetic care, with services including pigmentation treatment, melasma treatment, BBL, IPL, BioRePeel, and skin analysis as part of its wider approach to long-term skin health and tailored results
