Splash And Relax Get Inflated For A Season Of Sledging

Wednesday 6 November, 2013

The summer has gone and winter will soon be here and now is the time to look forward to the delights of the snow season, whether it is in England or on the mountain slopes of Europe, Splash and Relax have extended their excellent range of sledges to cope for every eventuality. One of the great new types of sledge, which has really expanded in its range of abilities over the past few years, is the inflatable sledge. Originally it appeared as a safety first for the very young and appeared in round rings, which gave total protection and a very safe ride but that was then and now the whole market has changed.

Splash and Relax are delighted to promote the Airboard Classic 130 Olive Inflatable Sledge, which is a top of the range inflatable sledge, which is aimed at the fast and furious of the sledging fraternity. The sledge is made of very durable urethane coated nylon and is constructed with a reinforced I beam technology that gives a very sleek shape with a pair of grab handles for the user to cling to on the run through the snow. The shape is a typical small front end with a large aft and a progressive widening of the sledge from front to back. The overall size is 115 cm x 70 cm x 25 cm when the sledge is inflated. This sleek design gives the rider a super feeling and is ideal for great slalom style riding and on the high slopes there is a very strong group of sledger's who fly down the slopes at great speed. The Airboard Classic 130 Olive Inflatable Sledge is an ideal sledge for high speed runs with tight turns that the rider is in command of and which will allow hours of high speed fun and competition.

Splash and Relax note that the older inflatable sledges had neither the durability or the control and speed of the Airboard Classic and this sledge brings a whole new world of extreme sports to the sledging game. One of the serious advantages that Splash and Relax have noted is that the lightness of the inflatable sledge is such that the ease of carrying the sledge back to the top of the slope is very little. It is also noted that when the sledging day is done then the sledge can be deflated and it will fold down to a size 40 cm x 25 cm x 5 cm

Splash and Relax are pleased that the Airboard Classic 130 Olive Inflatable Sledge(http://www.splashand
