Spotlight on InstruSafe custom configured trays

Friday 22 November, 2019

Harlow, UK – 22nd November 2019 - John Weiss & Son, the leading manufacturer and distributor of gold-standard ophthalmic micro-surgical instruments and procedures, is proud to be the Authorised UK Distributor for the InstruSafe
range of custom-configured trays.

InstruSafe trays can provide a solution for the intricacies of every instrument set. Offering both preconfigured tray designs and bespoke custom trays, they are designed by InstruSafe product experts. Custom-configured trays are designed to accommodate virtually any surgical instrumentation set and provide the same unparalleled protection as preconfigured trays.

InstruSafe trays are designed to organise and protect surgical instruments both in the operating room and during decontamination, and have undergone rigorous testing. Cleared for various sterilisation cycles, these reliable trays give hospitals and healthcare facilities more options when it comes to organising, sterilising and protecting their instruments.

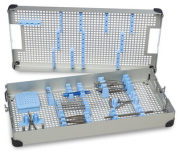

Each tray features durable medical grade silicone holders, precisely tailored to house any set of instruments. The organised trays reduce surgical set up time and decrease the risk of damaged instruments and unnecessary reprocessing of the surgical set.

Featuring a durable, lightweight construction, InstruSafe trays minimise replacement costs and extend the life of surgical instruments. The trays are constructed from perforated, anodised aluminium, which outlast traditional plastic options, which can warp, crack and break with continued use. The tray's feet, handles, latches and silicone instrument holders are designed to organise and protect from the point of decontamination through to the end of a surgical procedure.

InstruSafe also offer transport containers which are the ideal choice for transporting and soaking large and special instruments, such as scopes and robotic instruments. They are made of highly-durable material to withstand everyday use and high temperatures of up to 230°F during the wash cycle.
