Stuart Pirie Appointed as VP of Software Engineering at MODS

Thursday 20 October, 2022

Now in its 20th year in operation, MODS Management – a leading software developer offering a range of innovative digital solutions for newbuild capital projects as well as maintenance, upgrades and decommissioning of industrial assets – welcomed Stuart Pirie as Vice President of Software Engineering on 17th October 2022.

"I am delighted to welcome Stuart to the MODS family as our VP of Software Engineering," says Jon Bell, CEO. "He has an established relationship with our developers through his previous contract work. This new role will leverage those relationships alongside his technical expertise to drive focus on continuous product improvement."

With extensive experience in software development, Stuart had previously been working as an independent contractor developing MODS latest materials management application. As such, he brings a wealth of knowledge and background in both development and delivery of software applications.

Rich Cox, CTO says: "After working with Stuart over the past months I know he will greatly enhance our team and provide industry standard communication along with sound procedures, allowing Operations and Development to perform efficiently and with one key objective."

As it's a new role within the MODS organization, there's no precedent and Stuart expects it to evolve over time. Responsible for development and release of all of MODS's software products, Stuart's direct reports include all internal and external developers.

With upwards of 30 developers on board, Stuart says: "My initial focus is to unify the developers and get established procedures in situ that reinforce our quality standards and improve timeline estimates for releases and upgrades. Streamlining our development practices allows the developers to keep their focus squarely on product improvement."

About: MODS specialize in developing industrial software for complex assets. Originally servicing the energy sector for more than 15 years, the solutions MODS provide are designed by engineers for engineers, advancing capital projects, maintenance, and upgrades throughout industrial sectors.

The MODS goal is to simplify and digitize complex paper-based processes, driving cost savings and safety improvements in the field and the office.
