

Superfast Broadband Comes to Wales

Wednesday 1 October, 2014

Swansea, 1st October 2014 – Fast and superfast broadband services will be showcased at the Swansea Business Show on Thursday 2nd October.

The service, which uses a satellite connection to bring fast and superfast broadband to even the most rural of locations, is being delivered by leading satellite broadband provider, Global Teleports.

Global Teleports will be showcasing its recently launched cost-efficient satellite broadband service, **Vip3Play**, a state of the art triple play service, capable of delivering data, voice, and video services to both domestic and enterprise users.

The service is based on state of the art satellite technology, which is more cost effective and uses a much smaller dish than previously possible. **Vip3Play** can achieve speeds of up to 45Mbit/s for enterprise users, and 20Mbit/s for domestic users, and is simple to install.

“Business and domestic users across Wales are still suffering from a distinct lack of broadband coverage, and many of those will be left untouched by current rollout schemes,” commented Roger Boddy, CEO and Founder, Global Teleports. “Satellite broadband is able to serve those areas right now and you don’t have the shared bandwidth issue of other superfast broadband connections, meaning your speed and bandwidth will not be affected, even if all your neighbours sign up.”

Vip3Play is also eligible for the government-led Urban Broadband Fund's Connection Vouchers Scheme, which enables customers in the cities covered, including Cardiff, to receive funding to cover the cost of broadband installation.

Global Teleports will be showcasing its **Vip3Play** service on booth 58 at the Swansea Business show on 2nd October.

About Global Teleports

Global Teleports is a wholly privately owned company delivering satellite services across the globe. Global Teleports provides broadband connectivity with full triple play (voice, data, video) service capability, managed from a single point of contact. This means savings to its customers, who also benefit from faster downlink speeds.

Founded in 1998, Global Teleports is headquartered at Brookmans Park, Hertfordshire from where they manage a wholly owned, IP centric global infrastructure linking hubs in three countries giving direct access to satellites over the Indian, Pacific and Atlantic Oceans delivering their managed global service capability.
