

Surgisphere's Rapid COVID-19 Diagnosis Decision Support Tool Available For Immediate Global Use

Monday 16 March, 2020

Chicago, IL. In response to President Trump's news conference on March 13, 2020 declaring a state of emergency over coronavirus, Surgisphere has created an international COVID-19 Response Center. Surgisphere has developed a rapid diagnosis decision support tool and mortality risk calculator to aid in the battle against COVID-19, leveraging data from over 1,200 healthcare institutions around the world.

Surgisphere's diagnosis decision support tool has already been used by over 30,000 people in 59 countries, as COVID-19 rapidly spreads throughout the world. With an overall accuracy of 99.99%, this tool can help identify patients likely to be infected with COVID-19 without the usual 1-2 day waiting period. With feedback from the WHO, this model has been updated to focus on clinical symptoms and readily available lab tests, permitted rapid diagnosis virtually anywhere in the world in under an hour.

Surgisphere leveraged its real time global healthcare network to analyze more than 6,000 cases of confirmed COVID-19 infections at 37 hospitals located in nine countries. Using a combination of its big data repositories, leading machine learning capabilities, and cloud computing resources, Surgisphere has developed a tool that could help lead to more timely diagnosis of patients suspected of having COVID-19.

"Faster diagnosis means better use of precious hospital resources, earlier isolation, and ultimately, higher quality healthcare. This tool can help decrease transmission of this deadly infection. This is one of the first effective weapons in the war against coronavirus," said Sapan Desai, MD, PhD, MBA, FACS. Dr. Desai is the President and Chief Executive Officer of the Surgisphere Corporation.

The COVID-19 diagnosis decision support tool and mortality risk calculator are available at <https://www.Surgisphere.com>. Users can access the tool via their computer or smartphone.

Surgisphere is an ISO 27001:2013 certified organization and ranked #1 by Frost and Sullivan for machine learning-powered data analytics. Surgisphere works with hospitals, physicians, payers, and regulatory bodies to help deliver higher quality healthcare for a more affordable cost. With access to point of care data from over 1,200 international partners, Surgisphere's data analytics system (QuartzClinical) monitors the pulse of global healthcare in real time. This international collaboration has led to advances in care for kidney failure, aneurysms, lymphedema, peripheral artery disease, colon cancer, and cardiovascular disease.
