

Trump signs the Genius Act, legalizing crypto investment | Institutional capital quietly deploys BTC Miner cloud mining platform

Thursday 24 July, 2025

United States -- US President Donald Trump officially signed the Genius Act, marking the birth of the first comprehensive cryptocurrency regulatory law in the United States. This landmark legislation paves the way for pension funds, family offices and various compliant funds to enter the crypto asset market. As institutional capital returns to Wall Street and accelerates its entry into the crypto field, cloud mining is becoming a stable income tool that more and more savvy capitalists prioritize.

In an environment where currency prices fluctuate drastically and market uncertainty increases, the BTC Miner cloud mining platform has quickly gained favor with institutional and individual investors with its stable daily income of up to 7%, fully compliant operating mechanism and AI-driven computing power scheduling system.

What is a BTC mining machine?

BTC Miner is a globally operated artificial intelligence cloud mining platform where users can participate in Bitcoin mining by renting computing power without having to buy hardware or manage electricity bills. The platform integrates clean energy mines, smart contracts and automatic profit distribution systems to make cryptocurrency mining simple, transparent and efficient.

The main advantages include:

Daily income up to 7%, not affected by market conditions

[New users can get \\$500 in free mining credits](#)

No equipment installation or maintenance required, zero technical threshold

Income is automatically paid daily in equivalent US dollars

User funds are deposited in a first-tier bank account and insured by AIG

Support multi-currency account top-up and withdrawal (BTC, ETH, DOGE, XRP, SOL, etc.)

24-hour online customer service and technical support to ensure service continuity

Referral program income up to 7%, expand your passive income network

Why does capital power choose cloud computing power instead of trading?

With the passage of the GENIUS Act, institutional investors will turn their attention from high-risk token speculation to a more stable and predictable crypto asset investment path. BTC Miner cloud mining just meets the following core demands:

Income certainty: daily income is written into the contract to avoid market volatility risks;

Green compliance: using renewable energy to meet ESG investment requirements;

Fund security: customer assets are under bank custody and insurance protection;

Management transparency: the platform operates a licensed mine, and the contract structure is clear and traceable;

AI-driven optimization system: maximize computing efficiency and mining income.

Get started with BTC Miner cloud mining quickly

Register an account: Visit <https://btcminer.net> to create a free account

[Activate \\$500 trial: The system automatically issues trial points](#)

Choose a contract plan: Flexible choice of multiple periods, support short-term or long-term investment

System automatic mining: daily settlement income, full platform hosting

Income withdrawal: support multiple currencies withdrawal, free flow of funds

In addition, BTC Miner has a referral reward program: for every successful referral of a new user, you can get 7% of their mining income, and an additional 2% indirect referral income, helping you build a dedicated cloud computing network.

Trend observation: From trading to computing power, the logic of funds is changing

As the legislative environment becomes clearer, the crypto market is shifting from speculative investment to infrastructure construction and stable income. BTC mining machines are at the intersection of this structural opportunity - relying on the advantages of "low threshold, high security, and strong compliance" to create passive income infrastructure for crypto assets.
