

UK Connect and KeySIM support TEECH humanitarian vehicles across Europe and Ukraine

Saturday 19 September, 2026

UK Connect and KeySIM are supporting TEECH, the volunteer-run humanitarian charity, by helping its vehicle teams stay connected while travelling across Europe and Ukraine.

UK Connect is leading the project and supplying the communications equipment, while KeySIM is donating the SIMs needed to provide mobile connectivity for the vehicles' push-to-talk radios.

KeySIM's multi-network SIMs can connect to between two and four mobile networks in the UK and three mobile networks in Ukraine. This gives the radios access to alternative networks as the vehicles travel, rather than relying on a single mobile operator throughout the journey.

The radios will help TEECH's teams maintain communications during long international journeys through multiple countries and while operating in challenging environments.

TEECH, which stands for Telecoms Eastern European Challenge, was established in 1998 and is a UK-registered charity run by an unpaid team of volunteers. Its work includes delivering humanitarian aid and improving facilities for communities across Eastern Europe.

The charity has previously organised convoys carrying food, generators, clothing, medical supplies and other essential aid into Ukraine and neighbouring Moldova.

Neil Calvert, Managing Director of UK Connect, said:

"TEECH's volunteers undertake demanding journeys across Europe to deliver practical support where it is needed. We are proud to lead this project and supply the communications equipment that will help the vehicle teams stay in contact throughout their journeys.

"KeySIM's donation of the multi-network SIM connectivity is an important part of making that possible."

Graham Robinson, Managing Director of KeySIM, said:

"Reliable communications matter when volunteer teams are travelling thousands of miles across several countries and into Ukraine.

"Our SIMs can connect to between two and four mobile networks in the UK and three networks in Ukraine, giving the radios more than one network to use during the journey.

The collaboration brings together UK Connect's experience in deploying managed communications solutions and KeySIM's multi-network IoT connectivity to provide practical support for TEECH's humanitarian work.
