

# UK HAIR SALONS LOSE AT LEAST £1.2BN A YEAR FROM NO-SHOW CLIENTS

Wednesday 26 February, 2020

- The UK hairdressing industry loses billions as a result of customers not showing up to appointments
- Millennials are the worst offenders, with 44 per cent of women aged 18-29 admitting to not showing up to a scheduled hair treatment
- Powered by Flossie's booking software – a modern technology designed to reduce no-shows

The UK hairdressing sector loses at least £1.2bn every year as a result of clients not going to their appointments.

New research by Powered by Flossie, retail software that helps enterprise hair and beauty businesses reduce booking abandonment and increase revenue by streamlining the user experience, has found that a third (30 per cent) of women in London admit to not showing up to a hair appointment, leaving salons to swallow the costs.

With recent figures from Ibis World showing the total revenue generated by the UK hair and beauty industry to be £4bn, no-shows account for at least £1.2bn in lost income. This represents a potential additional thirty per cent of industry revenue forgone. Millennials were found to be the worst offenders, with more than two-fifths (44 per cent) of respondents aged 18-29 admitting to skipping a hair appointment at least once.

This is especially concerning for salons, as younger people are also their most frequent customers. The new Powered by Flossie data showed that 18-24 year olds are most likely to book monthly appointments, in comparison to all other age groups who average one appointment every 6 to 8 weeks.

As this data finds that the least reliable customers are also potentially the most lucrative, it's vital that salons are able to reduce the amount of no-shows. As younger customers are more likely than average to book beauty services online (34 per cent of 18-29 year olds vs 27 per cent average), technological solutions to this issue are increasingly important.

Internal data also shared by Powered by Flossie found that customers are significantly more likely to attend beauty appointments if they have paid in advance, as it creates a financial repercussion for missing their bookings. The younger generation of consumers are also becoming used to having flexible payment options, including buy-now-pay-later (BNPL) services. By incorporating these payment methods into online booking, salons can attract lucrative clients, while minimising the risk of no-shows.

Powered by Flossie enables salons to do that easily, the software accesses calendar data displayed on the salon's website (like services, times and employees) and processes the information, resulting in appointments that are merchandised similar to how you would buy fashion and apparel online, allowing customers to pay upfront.

The software works alongside most calendar software systems as a plug and play solution that extends the capabilities of the existing technology with modern tools that increase online booking rates and supports various pay-in-advance solutions providing guaranteed revenue.

## Jenene Crossan, CEO and Founder of Powered by Flossie said:

*"Salons in the UK face a number of challenges, but one of the most widespread is no-show clients. Traditional booking methods have only served to broaden this problem, leaving many salons with no choice but to accept no-shows as the cost of doing business. However, £1.2bn is a steep cost indeed.*

*Having spent more than 20 years in the technology industry, I've seen first-hand how it can be used to change entrenched business practices. Powered by Flossie provides enterprise salons with software that enables them to offer their clients the best booking solutions; incorporating innovative payment options, easy to use interfaces and a way to end the no-show status-quo."*

## Notes to Editors

Powered by Flossie helps UK hair and beauty businesses [and product companies] get more online bookings, faster, by connecting with their different calendar management software and modernising it.

Poor user interfaces and failing customer experiences are causing enterprise salons to lose out on significant amounts of revenue - as they're having to endure cart abandonment rates of up to 50 per cent.

A plug and play solution, Powered by Flossie extends the capabilities of the existing calendar software with modern tools that increase online booking rates and supports various pay-in-advance solutions providing guaranteed revenue.

Kiwi co-founders Jenene Crossan and Steve Torrance have been building to a vision; creating smart tools for retailing hair and beauty services online. Powered by Flossie started as a Tried & Tested, curated marketplace in 2012 called Flossie. Over 70,000+ consumers use Flossie as the preferred method to book an appointment because it's fast, friendly and efficient.

## Methodology

An October 2019 report from Ibis World found the revenue of the UK hair and beauty to be £4bn. The latest research from Powered by Flossie, conducted in December 2019 among 1,034 women in London. This found that 30% had not attended a scheduled hair appointment at least once. The £4bn revenue therefore represents only 70% of the potential revenue of the industry, with a further 30% (£1.2bn) lost to no-shows.
