Unmasking Concealed Intent: The Zero-Knowledge Video Forensics Vault Decoding True Motivations in High-Stakes Operations

Tuesday 21 April, 2026

FRANKFURT, Germany – April 21, 2026 – FACS PROMIMIK launches a classified zero-knowledge behavioral forensics engine to expose hidden intent in elite M&A, finance, and intelligence operations.

In high-stakes venture capital, corporate finance, and private intelligence environments, outcomes hinge on one unquantifiable variable: true human intent. Whether executing multi-million-dollar M&A transactions, assessing severe B2B credit risks, or deploying Special Investigation Units (SIUs) for complex commercial litigation, elite professionals consistently face a critical blind spot between what a subject says and what they actually conceal. To close this intelligence gap, FACS PROMIMIK has launched a highly classified, vault-like behavioral forensics engine.

Surgical Relevance: Eliminating Conversational Noise

"In high-stakes M&A and intelligence, a single undetected contradiction can cost millions. Our zero-knowledge vault exposes true physiological intent in milliseconds, leaving no digital footprint."
— Özgür Sahin, Founder & Behavioral Engine Architect

Standard sentiment AI suffers from a fatal flaw: it operates like a blunt instrument, generating paralyzing false positives by treating a trivial social pleasantry with the same weight as a critical financial misrepresentation. FACS PROMIMIK is engineered exclusively for high-stakes relevance. The proprietary engine ignores irrelevant conversational artifacts—such as a founder fabricating a minor detail about a morning routine to break the ice during a private equity pitch—and surgically zeroes in on mission-critical cognitive load.

By synchronously mapping the spoken audio narrative directly against involuntary neuromuscular responses down to the exact millisecond timecode, the platform isolates "multimodal incongruence" only when it matters most. It separates harmless social friction from true operational threats, exposing physiological contradictions exactly at the moment a critical strategic statement is made.

Absolute Operational Stealth: The Zero-Knowledge Vault

Acquiring this asymmetrical information advantage requires uncompromising discretion. Elite professionals—from private equity partners and M&A dealmakers to corporate litigators and OSINT analysts—must be able to conduct profound credibility assessments without the risk of exposing their targets, compromising NDAs, or leaving a digital footprint that reveals their own strategic focus and true intentions.

FACS PROMIMIK guarantees this absolute operational stealth through a strict Zero-Knowledge Architecture, physically and legally isolated under European data sovereignty in Frankfurt, Germany.

Ingested via bank-grade TLS 1.3 encryption, classified corporate media never touches a physical hard drive. The forensic algorithms process video exclusively in ephemeral RAM sectors. In the exact millisecond the interactive intelligence report is generated, the source media is cryptographically pulverized on the server level. The platform retains zero data, keeps no logs, and utilizes no media for AI training—allowing professionals to decode their targets and exit the system completely undetected.

Instant Access & Proof of Concept

Engineered for immediate use by decision-makers, the platform deliberately bypasses lengthy IT-integration and procurement cycles. To demonstrate the engine's deterministic leverage, FACS PROMIMIK has opened a strictly regulated Proof of Concept (POC) tier. Upon clearance of a verified institutional, financial, or intelligence email domain, professionals receive a complimentary, single-use Verification Credit to audit the Zero-Knowledge Architecture with zero initial financial commitment.

Following the POC, users seamlessly scale their behavioral forensics via discreet, on-demand payments (Verification Packages at €499 for 5 credits), maintaining absolute operational secrecy.
