Frankfurt, May 8th, 2025 – **Automakers in the United States have invested in more automation: total installations of industrial robots in the car industry increased by 10.7%, reaching 13,700 units in 2024. These are preliminary results, presented by the International Federation of Robotics (IFR).**

"The United States has one of the most automated car industries in the world: The ratio of robots to factory workers ranks fifth, tied with Japan and Germany and ahead of China," says Takayuki Ito, President of the International Federation of Robotics. "This is a great achievement of modernization. However, in other key areas of manufacturing automation, the US lags behind its competitors."

## Robots from abroad

The majority of industrial robots are imports from overseas, as there are few robot manufacturers producing in the United States. Globally, 70% of installations are produced by four countries: Japan, China, Germany and South Korea. Within this group, Chinese manufacturers are the most dynamic, with production for their huge domestic market more than tripling in five years (2019-2023). This puts them in second place after Japan. China's success is based on their national robotics strategy. Its manufacturing industry installed a total of about 280,000 units per year between 2021 and 2023, compared to a total of 34,300 installations in the United States in 2024.

## US vs. China robot market

In **China**, robotics and automation are penetrating all levels of production. This is evidenced by its high robot density of 470 robots per 10,000 employees in manufacturing - the third highest in the world, surpassing Germany and Japan in 2023. The **United States**, on the other hand, ranks only tenth among the world's most automated manufacturing countries with a robot density of 295 robots per 10,000 employees. The country's automation is heavily concentrated in the car sector: Around 40% of all new industrial robot installations in 2024 are in **automotive**. This is followed by the **metal and machinery industry** with 3,800 units representing a market share of 11%. Installations in the US **electrical and electronics industry** has a market share of 9% with 2,900 units sold.

At the **Automate Show 2025 in Detroit**, IFR Vice President Jane Heffner will present the preliminary figures on industrial robot installations for the North American market on Wednesday, 14 May at 10:30 am (Automate Show Theatre - Booth 4832). The Robotics Executive Roundtable by IFR will then discuss the trends and technologies driving the industry today. The Panel: **Marina Bill** ABB, **Torsten Kroeger** Intrinsic, **Julia Astrid Riemenschneider** United Robotics Group & Rethink Robotics, **Matthew Wicks** Zebra Technologies, **Robert Huschka** A3:
