

VibeVPS Cuts The Cost Of High-End Hosting With OnApp, PEER1 & Dell

Thursday 13 March, 2014

VibeVPS worked closely with Dell and OnApp to develop its cloud hosting service, and are pioneers of a new platform that combines the OnApp cloud management system with Dell enterprise hardware. Featuring high-end SSD/SAS storage and 10Gb networking throughout, the Vibe architecture is designed to optimise cloud scalability, performance and resilience.

"It's fantastic to see VibeVPS bring such an aggressively priced and full-featured cloud service to market," said Kosten Metreweli, OnApp's Chief Commercial Officer. "When you build your cloud with Dell and OnApp, you're getting best-in-class hardware and cloud management software in a package that's tested and proven. It's a combination that lets hosting like Vibe do what they do best: bring high performance, high quality cloud services to their customers."

By harnessing the platform's power, flexibility and integrated storage technology, VibeVPS provide unparalleled UK pricing for enterprise cloud. Prices start at £9.99 for a full cloud server based on 1Gb RAM and 1.2GHz CPU - which is by some distance the best value cloud product in the UK.

"You don't have to spend sixty pounds a month or more to get a robust hosting service for your apps," says Peter Duggal, Managing Director of VibeVPS. "With VibeVPS you can spend less than ten, and get performance and features that put expensive providers to shame."

Each VibeVPS server is fully self-healing with automatic failover, and provides the perfect base for any hosting scenario - from rock solid web hosting to handling the most demanding of mission-critical applications.

VibeVPS - Better, Faster, Cheaper Cloud from only £9.99

For further information please get in touch with Managing Director, Peter Duggal by email at peter@netscangroup.com, or on Twitter (@vibeVPS) during #VibeHour - every Friday, 12pm-1pm.

Notes for editors:

Vibe VPS

VibeVPS is an enterprise grade VPS provider, delivering 'true' cloud on our next generation platform at unparalleled pricing.

As part of the Netscan Group, we have over 15 years of in-depth experience in providing award winning hosting solutions globally and our relentless focus on providing innovative web solutions for our customers has fuelled strong growth for the business.

Since its launch in 1998 Netscan has driven this momentum by delivering tailored web solutions, high-quality infrastructures and round-the-clock support to customers for a price which makes solid commercial sense.

Today we list more than 10,000 customers worldwide, including some of the world's largest global businesses.

With our knowledge and track record in the sector, we have established partnerships with leading hardware and software suppliers to deliver the next generation of no-compromise, cost-effective cloud. We are fully CIF (Cloud Industry Forum) certified, and our no-compromise infrastructure is based around fully redundant 10Gb networking throughout. Our distributed SAN utilises hybrid storage including lightning fast SSD drives for the very best possible performance.
